

Request to change PAN-DB URL categories

Date: 2026-08-20

URL / domain: <https://vigie-clinique.fr/>

Also please rate: <https://www.vigie-clinique.fr/>

Current PAN-DB categories (please update)

- insufficient-content: does not match the live site (64+ public HTML pages, sitemap.xml, legal pages, professional editorial content in French).
- newly-registered-domain: automatic age-based label. This is a legitimate self-hosted professional tool, not a disposable malicious domain.
- low-risk: agreed; the site is not malicious.

Requested categories

- health-and-medicine
- business-and-economy

If only one category can be applied: health-and-medicine.

What the site is

Vigie is a French self-hosted clinical research project-management application for hospital research teams (clinical project managers, CRAs / monitors, data managers, investigators). It is not an eCRF, not a patient portal, not advertising, not user-generated social content, and not a parked or placeholder domain.

Public pages are server-rendered HTML. The authenticated application requires an invited professional account. There is no open public signup, no ads, and no third-party analytics trackers.

A previous thin login-only appearance likely caused the insufficient-content rating. That version is no longer what is served. Please recrawl the URLs below.

Public content (not behind login)

Orientation: about, how it works, methodology, comparison, team roles, glossary (about 50 terms), FAQ (25 items), help, changelog.

Roles: project manager, CRA, data manager, clinical research technician, investigator, sponsor.

Guides: start a study, open an investigator site, Subject ID without collecting identity, query workflow, monitoring visits, TMF, CAPA, roles and access.

Use cases: oncology, academic sponsor, MDR, IVDR, hospital clinical research unit.

Regulatory commentary pages (RIPH, EU 536/2014, MDR, IVDR, ICH E6(R3), CNIL), labelled as work aids, not legal advice.

Legal: legal notice, privacy, terms, accessibility, contact, hosting, security.

Why this is not insufficient-content

- sitemap.xml lists 64 URLs (HTTP 200, application/xml).
- Unique French professional prose on each public page.
- Header and footer expose the full public information architecture.
- The login page itself contains substantial explanatory text around the form.
- No malware distribution.

Why this is not a malicious newly registered domain

The application is self-hosted by the operator on their own VPS, served over HTTPS. It is used as an internal work tool for clinical operations. PAN-DB already rates the risk as low. Please categorise based on content, not solely on domain age.

About this file

This PDF is submitted as supporting evidence for a URL category review. It is not a malware sample, not a packet capture, and not an exported Palo Alto Networks firewall log. Please recrawl <https://vigie-clinique.fr/> and <https://vigie-clinique.fr/sitemap.xml>.
